DETAILED ACTION

1. This office action is in response to applicant's response filed on 04/22/2009.
2. Claims 18-26 and 32-33 are pending.
3. Claims 1-17 and 27-31 are cancelled.
4. Applicant's arguments are persuasive in the light of Applicant Remarks filed on 04/22/2009. Therefore the rejections of the claims have been withdrawn.

Allowable Subject Matter

1. Claims 18-26 and 32-33 are allowed.
2. Independent claims 18, 32 and 33 are the inclusion of the following limitations that are not found in the prior art and they are uniquely distinct features. The closest prior arts are Yokoyama et al., Pub. No. US 2001/0029526 A1 and Okada et al., Patent Number: 6,049,670.

Yokoyama discloses in servers that distribute mobile agents, controlling the traveling time of distributed agents is difficult. Also, maintenance management is difficult when there are large numbers of frequently updated mobile agent traveling destinations. Traveling lists are managed separately from agent programs and traveling time is predicted based on home terminal information at traveling destinations and information about programs to be executed at traveling destinations. The traveling destinations are divided into

Art Unit: 2434

multiple groups as needed and agent distribution is performed through these groups. This allows the time involved in traveling to be controlled. Also, the server performs maintenance and management of traveling destinations, thus allowing large numbers of traveling destinations and frequent updates. And Okada discloses an identifier managing device is used in a software distribution system in which software programs are distributed to distribution terminals from a distribution center through a network, for managing information including identifiers of the distribution terminals. A host computer in the distribution center sells the software programs corresponding to the request from users at the distribution terminals, each of which is assigned a terminal identifier and a terminal password. Each of the users is assigned a user identifier and a user password. A distribution identifier is written in the software programs before the software programs are sold, and the host computer manages the history of the distribution of the software using these identifiers and the passwords. The terminal password is rewritten whenever the terminal accesses the host computer for preventing illegal duplications of the software programs at the users end.

However, these arts individually or in combination, fail to anticipate or render the following limitations: "A server apparatus, connected to an information processing terminal via a network, for determining whether or not to distribute a program in response to and identified in a program obtainment request attached to a terminal ID transmitted from the information processing terminal,

wherein the information processing terminal stores the terminal ID such that the stored terminal ID cannot be re-written externally,

wherein the identified program includes a program body for running on the information processing terminal and program specific information for running the program body, and

wherein the server apparatus comprises:

a receiving unit operable to receive the program obtainment request attached to the terminal ID, the program obtainment request being received from the information processing terminal;

a table holding unit operable to hold a first table identifying a relationship between a previously distributed program and a terminal ID; and

a decision unit operable to (i) decide whether or not the terminal ID attached to the program obtainment request received by the receiving unit is recorded in the first table, (ii) distribute only the program body of the identified program to the information processing terminal by prohibiting distribution of the program specific information of the identified program in a case where the decision unit decides that the terminal ID is recorded in the first table, and

(iii) in a case where the decision unit decides that the terminal ID is not recorded in the first table, add, to the first table, the terminal ID and the program specific information, such that the added terminal ID and the program specific information have a corresponding relationship identified in the first table and

Art Unit: 2434

distribute the program body and the program specific information, as the identified program, to the information processing terminal, wherein the distributed program specific information is for revoking the information processing terminal from attempting an unauthorized use of the identified program” as claimed.

Examiner notes to claim 33, the claimed storage medium refer to the disclosed recording medium rather than the disclosed transmission medium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
